

SMART CHOICE TOUR & TRAVELS

SEO Audit, Implementation & Growth Roadmap

Client Report | August 2026

Website: www.thesmartchoicetours.com

Executive status: Technical SEO is complete, core on-page implementation is substantially complete, GSC-driven keyword/page mapping is mostly completed, the website is deployed, and Local SEO has been established through the Google Business Profile. The next major growth lever is authority building and ongoing content/GSC optimization.

Prepared from the supplied implementation reports, Google Search Console screenshots/data, Semrush audit snapshots, and Google Business Profile information. This report separates completed implementation from ongoing/next-step work and does not claim unverified rankings or backlinks.

1. Executive Summary

The project has moved beyond the basic technical setup stage. The website now has a structured SEO foundation covering technical accessibility, commercial page optimization, travel-guide optimization, keyword-to-page mapping, local relevance, structured data, internal linking and conversion pathways.

Area	Current status	Evidence / scope
Technical SEO	DONE	HTTPS, canonicals, sitemap, robots, 404 handling, redirects, schema, route/build verification
On-page SEO	~90–95% complete	23/25 site pages reported fully optimized; remaining pages should receive a final title/meta revision
Keyword → Page mapping	MOSTLY COMPLETE	GSC-driven commercial and informational queries mapped to dedicated pages
Local SEO	FOUNDATION COMPLETE	GBP established; NAP/local schema/site relevance implemented; Services section still needs refinement
GSC	ACTIVE / BASELINE	3-month query/page performance used to drive optimization
Authority / backlinks	NOT YET CAMPAIGNED	Existing third-party footprint reported by Semrush; no new outreach campaign completed

Content	FOUNDATION COMPLETE	10 travel guides + guide hub; next step is topical expansion around commercial clusters
Conversion	FOUNDATION COMPLETE	WhatsApp, phone, booking CTAs and guide-to-package funnels present; measurement/optimiz

Important: “Optimized” means implementation was completed and verified in the project reports. It does not mean Google has already rewarded every change with higher rankings. SEO performance must be measured after Google recrawls and reprocesses the deployed pages.

2. Technical SEO — Completed

The technical foundation was audited and repeatedly verified before deployment. The implementation reports recorded successful builds, stable routes and no deployment/git push until approval was given.

Technical item	Status	Implementation
HTTPS	DONE	0 non-HTTPS URLs reported; 4 HTTPS URLs shown in the GSC HTTPS report snapshot
Canonical URLs	DONE	Self-referencing canonicals across active pages
Sitemap	DONE	25 canonical HTTPS URLs reported in public/sitemap.xml
Robots.txt	DONE	Allow rule + sitemap reference
404 handling	DONE	React catch-all NotFound + noindex; invalid guide slugs render NotFound
Host canonicalization	DONE	Non-www → www 301 configuration in vercel.json
Open Graph asset	DONE	Missing OG image asset added
Structured data	DONE	TravelAgency/LocalBusiness/WebSite/OfferCatalog + TouristTrip/FAQPage/Article/BreadcrumbList
Build / routes	DONE	25 routes repeatedly verified; npm run build passed with 0 errors in supplied reports

Remaining technical consideration: the site is a React/Vite CSR application. Google can render JavaScript, but the initial HTML shell is thin for non-JavaScript crawlers. Pre-rendering/SSG can be considered later if evidence shows a need; it is not a current blocking issue.

3. On-Page SEO — Implementation Status

The main commercial and informational pages were optimized around search intent rather than simply inserting keywords. Titles, descriptions, headings, internal links, structured data, image alt text and conversion paths were addressed.

Scope	Result
Homepage	Primary local agency intent optimized; one H1; strong commercial CTAs; NAP/schema/internal links
7 package pages	Commercial titles/meta, verified starting prices, FAQs, TouristTrip schema and internal links
Cars / Services / Book / Contact	Titles/meta, H1 alignment, TaxiService / ContactPage schema, contextual internal links and conversion elements
Guides hub + 10 guides	Meta titles, Article + BreadcrumbList schema, commercial funnel links
Internal linking	Package ↔ guide ↔ booking relationships strengthened; navbar exposes commercial package pages
Images	Descriptive alt attributes across hero, package, service, destination and fleet imagery
Metadata consistency	Homepage title/meta standardized; package metadata aligned with verified package data

Commercial package metadata snapshot

Page	Verified starting price	Final title theme
/packages/char-dham-yatra	■15,000	Char Dham Yatra Package from Haridwar 2026
/packages/kedarnath	■5,500	Kedarnath Tour Package from Haridwar 2026
/packages/badrinath	■6,000	Badrinath Tour Package from Haridwar 2026
/packages/mussoorie	■2,500	Mussoorie Tour Package from Haridwar 2026
/packages/nainital	■3,500	Haridwar to Nainital Tour Package 2026
/packages/rishikesh	■1,200	Rishikesh Tour Package from Haridwar 2026
/packages/haridwar-sightseeing	■800	Haridwar Local Sightseeing Package 2026

4. Keyword Strategy & Page Mapping

The keyword strategy is now intent-led: broad local agency intent is owned by the homepage, destination/package intent is owned by commercial package pages, informational intent is owned by guides, and transactional intent is owned by the booking page.

GSC query / intent	Observed position	Target page	Action
Mussoorie tour package from Haridwar	~10	/packages/mussoorie	Verified / preserved
Plan a Kedarnath trek from Gauri Kund	~4	/guides/kedarnath-travel-guide-2026	Internal link strengthened
Haridwar to Kedarnath budget / Kedarnath	udget~7 / ~32	/guides/kedarnath-trip-cost-budget-2026	3 Internal link + package funnel
Haridwar to Nainital tour package	~42	/packages/nainital	Verified / preserved
Best travel agency in Haridwar / travel agency in Haridwar	~31 / ~39	/	Verified / preserved
Tour and travel near me	~3	Site-wide / contact	Local NAP + ContactPage
Badrinath tour package from Haridwar	~42	/packages/badrinath	Verified / preserved
Char Dham Yatra package cost from Haridwar	ar~31	/packages/char-dham-yatra	Verified / preserved

Keyword architecture

Local: travel agency in Haridwar → Homepage / Contact / GBP

Taxi: car rental from Haridwar → Cars

Pilgrimage: Char Dham / Kedarnath / Badrinath → dedicated package pages + guides

Leisure: Mussoorie / Nainital / Rishikesh → dedicated package pages + supporting guides

Informational: route, budget, planning, packing → travel guides

Transactional: book tour package & taxi → /book

Status: Keyword → page mapping is **mostly completed** for the queries supplied from GSC. Future mapping should be driven by new queries appearing after deployment rather than by creating pages for every variation.

5. Google Search Console — Baseline & Findings

The supplied GSC screenshots cover the last 3 months. Google describes the Performance report as the place to evaluate clicks, impressions, CTR and average position, and to analyze performance by queries and pages.

■cite■turn0search1■turn0search2■

Top pages visible in the supplied GSC snapshot

Page	Clicks	Impressions
/	65	393
/book	4	153
/contact	4	126
/about	1	93
/guides/kedarnath-trip-cost-budget-2026	1	64
/gallery	1	36
/packages/rishikesh	1	2
/cars	0	39
/guides/mussoorie-travel-guide-2026	0	27
/packages/badrinath	0	13

Top queries visible in the supplied GSC snapshot

Query	Clicks	Impressions
smart choice tours and travels	1	16
smart tours and travels	1	6
all haridwar tours & excursions in 2026	0	7
smart choice	0	5
best travel agency in haridwar	0	5
car rental from haridwar	0	5
travel agency in haridwar	0	4
haridwar to nainital tour package	0	4
nearby tour and travels contact number	0	3
smart tours	0	3

Interpretation: the homepage is currently the strongest visible page in the supplied snapshot (65 clicks / 393 impressions). The /book and /contact pages also receive meaningful impressions, which supports the commercial intent structure. Several commercial queries already appear, but many have very low click counts, indicating that the next growth opportunity is to increase visibility and CTR rather than create unnecessary duplicate pages.

Measurement rule going forward: use GSC query + page + CTR + impressions together. Google also recommends focusing on trends in clicks and impressions rather than position alone. ■cite■turn0search2■

6. Local SEO — Current Status

The Local SEO foundation is established. The website contains consistent business identity/NAP information and local structured data, while the Google Business Profile is active and managed.

Local component	Status	Next action
Google Business Profile	DONE	Maintain, post updates, collect genuine reviews
Business description	DONE	Keep factual and customer-focused
NAP consistency	DONE	Keep exact business name/address/phone across properties
Website local relevance	DONE	Haridwar intent, service area and contact information integrated
GBP Services	PENDING FINAL SETU	Add only genuine services; include descriptions/prices where appropriate
Reviews	ONGOING	Request authentic reviews from real customers; no incentives/fake reviews
Photos	ONGOING	Add real office, vehicles, trips and team/service photos
Service-area hygiene	ONGOING	Keep areas genuinely served; avoid artificial location expansion

Google states that Business Profile services can include descriptions and prices, and that services may be highlighted when local customers search for an offering. ■cite■turn0search0■

Client-facing note: the GBP Services section should be treated as a product/service catalog. Use real offerings and verified pricing; do not add keyword-only fake services.

7. Authority & Backlink Status

Authority building is the major area that has **not yet been executed as a campaign**. The supplied Semrush dashboard shows an existing external footprint, but those links should not be described as newly built by this SEO project.

Metric / activity	Current status	Report interpretation
Semrush Authority Score	2	Low authority baseline; growth opportunity
Referring domains	16	Existing footprint reported by Semrush
Backlinks	19	Existing links reported by Semrush; not counted as newly acquired campaign links
New quality outreach backlinks	0 verified	No structured outreach campaign completed yet
Spam/paid link building	0	Intentionally avoided
Local citations campaign	Not executed	Next authority/local step
Hotel/partner outreach	Not executed	High-value local partnership opportunity
Editorial travel mentions	Not executed	Future earned-link opportunity

Authority build target model

The goal is not “more links at any cost.” The target is a small number of relevant, legitimate signals: local citations, travel directories, verified operator profiles, hotel/partner relationships and editorial mentions. Exact-match anchor manipulation and bulk link packages should be avoided.

Estimated completion: 0% of the planned *new authority campaign* is treated as complete. Existing 16 referring domains / 19 backlinks are baseline assets, not campaign deliverables.

8. Content & Topical Authority

The site already has a meaningful informational layer: a travel-guide hub plus 10 individual guides. Several guides are connected to commercial package pages, creating a content-to-conversion funnel.

Cluster	Existing assets	Next opportunity
Kedarnath	Travel guide + trip cost/budget guide + package	Add route, best time, packing, helicopter, trek FAQ/support pages only wher
Char Dham	Complete guide + budget guide + package	Build registration, itinerary, route, packing and seasonal support content
Mussoorie	Guide + package	Add high-intent itinerary/transport content if GSC shows demand
Nainital	Package + mapped commercial query	Build supporting travel/planning content if impressions grow
Rishikesh	Adventure/spiritual guide + package	Support rafting/sightseeing queries if commercially relevant
Haridwar	Locations guide + sightseeing package	Expand local sightseeing and transit-intent content based on GSC

Principle: content should be built around clusters that can feed commercial pages. Avoid publishing generic travel articles that have no clear connection to a service, package or booking intent.

9. Conversion SEO

The website already contains strong conversion infrastructure: WhatsApp CTAs, click-to-call links, a booking form, package CTAs and guide-to-package pathways.

SEO system: visibility → relevance → trust → intent → booking

Conversion asset	Current status	Next improvement
WhatsApp CTAs	Implemented	Track clicks and compare page-level conversion performance
Phone CTAs	Implemented	Track click-to-call events consistently
Booking form	Implemented	Measure starts vs completed submissions
Package CTA	Implemented	Measure guide → package → booking flow
Guide sidebar/end CTA	Implemented on key guides	Expand proven CTA pattern to more high-intent guides
Trust signals	Implemented in parts	Increase genuine review/photo proof and service evidence

Goal: SEO success should ultimately be measured as qualified enquiries and bookings, not only rankings.

10. Structured Data / Schema Architecture

The implementation uses structured data to describe the business, website, commercial packages, FAQs, travel articles and relevant page types. The architecture is designed around the site's actual entities and visible content.

Schema	Where / purpose	Status
--------	-----------------	--------

TravelAgency / LocalBusiness	Business identity, NAP, local entity	Implemented
WebSite / OfferCatalog	Site and commercial offering context	Implemented
TouristTrip	Package pages: name, description, price, provider, URL	Implemented
FAQPage	Visible package/page FAQs mapped 1-to-1	Implemented
Article	Travel guide article metadata	Implemented
BreadcrumbList	Guide hierarchy: Home → Guides → Article	Implemented
TaxiService	Cars/taxi service context	Implemented
ContactPage	Contact page + NAP context	Implemented

The schema should remain synchronized with visible page content and verified business/package data. Avoid invented reviews, prices or claims.

11. What Is Completed vs What Remains

Workstream	Completed	Remaining
Technical SEO	100%	Monitor; consider prerendering only if evidence requires it
On-page SEO	~90-95%	Final check of remaining site pages; ongoing CTR/content refinement
Keyword mapping	Mostly complete	Map new GSC queries as data grows
Local SEO	Foundation complete	Finish GBP Services; reviews/photos are ongoing
Content	10 guides + hub	Build additional cluster content from GSC demand
Authority	Baseline only	Citations, partnerships, editorial mentions, legitimate backlinks
Conversion	Foundation complete	Event measurement + funnel optimization
GSC monitoring	Active baseline	Compare post-deployment periods and identify quick wins

12. Recommended 30-Day Action Plan

Week	Priority	Actions
Week 1	Local + Authority foundation	Finish GBP Services; verify public profile; establish Bing/TripAdvisor/Justdial/Sulekha where appro
Week 2	Authority	Begin genuine local hotel/partner outreach; secure relevant directory/operator profiles; document e
Week 3	Content + GSC	Review new queries/impressions; improve pages sitting in striking-distance positions; expand one o
Week 4	Conversion + reporting	Measure WhatsApp/call/booking actions; compare GSC clicks/impressions/CTR; report gains and n

Client deliverable standard

Every authority activity should be logged with: platform, URL, business name, NAP used, target page, link type, date created, verification status and screenshot. This creates a clean audit trail and prevents inconsistent citations.

Appendix A — Source & Methodology Notes

This report is based primarily on the implementation/audit reports and screenshots supplied in the project conversation. Where exact GSC figures were visible in the supplied screenshots, they are reproduced as a snapshot rather than presented as live data.

Google Search Console defines clicks, impressions, CTR and average position as core Performance metrics and supports analysis by query and page. ■cite■turn0search1■turn0search7■

Google also notes that query tables may omit some anonymized/truncated data, so a visible list of queries should not be treated as the complete universe of searches. ■cite■turn0search4■

For Google Business Profile, services can be grouped by category and may include descriptions and prices; custom service names should not be used for phone numbers or prices. ■cite■turn0search0■

Appendix B — Key Client-Safe Metrics

Metric	Value / status
Active routes reported	25
Travel guides	10 + /guides hub
Commercial package pages	7
Core pages optimized	/cars, /services, /book, /contact
On-page implementation	~90–95% of total site scope
Keyword mapping	Mostly complete for supplied GSC query set
Semrush referring domains	16 (existing baseline)
Semrush backlinks	19 (existing baseline)
New authority campaign backlinks	0 verified
Semrush Authority Score snapshot	2
Technical build verification	0 build errors in supplied reports
Deployment	Completed before Local/Authority work

Bottom line: The site has moved from “technical setup” into the growth stage. The next meaningful SEO gains are expected to come from local profile completeness, legitimate authority signals, content clusters tied to commercial intent, and disciplined GSC-driven iteration.
